How To Prevent Stormwater Pollution

What is stormwater?

Stormwater is water from rain or melting snow that does not soak into the ground. It flows from rooftops, over paved areas, bare soil, and sloped lawns. As it flows, stormwater runoff collects and transports soil, animal waste, salt, pesticides, fertilizers, toxic metals, oil and grease, debris and other potential pollutants. In general, untreated stormwater is unsafe.

What is the problem?

Rain and snowmelt wash pollutants from streets, construction sites, and land into storm sewers. Eventually, the storm sewers empty the polluted stormwater directly into streams and rivers without prior purification or treatment. In Camden and Gloucester City, the sewage and stormwater are combined in the same pipe. During a storm when the flow exceeds the sewers' capacity the untreated sewage and stormwater overflow into the city's waterways and streets.

Polluted stormwater degrades our lakes, rivers, wetlands and other waterways. Untreated stormwater discharging to the ground can contaminate aquifers that are used for drinking water. Nutrients such as phosphorous and nitrogen can cause the overgrowth of algae, resulting in oxygen depletion in waterways. Toxic substances from motor vehicles and careless application of pesticides and fertilizers threaten water quality and can kill fish and other aquatic life. Bacteria from animal wastes and improper connections to storm sewer systems can make lakes and waterways unsafe for wading, swimming and fish consumption. Eroded soil is a pollutant as well. It clouds the waterway and interferes with the habitat of fish and plant life.

People really can make a difference when it comes to reducing stormwater runoff and the problems and costs that go with it. Because we all contribute to the problem, we all can be a part of the solution. It starts with paying attention to stormwater; at home, at work and in our communities.

Tips to prevent stormwater pollution:

- Pick up animal waste.
- Look for ways to keep runoff out of the stormwater system so it can soak into the ground.
- Compost or mulch leaves and yard debris.
- Plant rain gardens, use rain barrels.
- Remove litter from streets, sidewalks, and storm drains adjacent to your property.
- Sweep debris from driveways and parking lots rather than hosing debris into storm drains.
- Water the lawn, not the sidewalk and driveway.
- Reduce paved surfaces.
- Do not drain swimming pools into storm drains or road ditches.
- Reduce winter salt application.
- Triple rinse and recycle empty pesticide and fertilizer containers.
- Reconsider using toxic asphalt sealers, seal cracks only.
- Avoid using chemicals near waterways or storm drains.
- Dispose of automotive fluids appropriately.
 Fix vehicle fluid leaks immediately.
- Clean up spills immediately and properly dispose of cleanup materials.
- Avoid spraying pesticides/fertilizers in windy conditions or when rain is in the forecast.
- Cover and contain topsoil and mulch during installation.
- Reduce fertilizers, turf builders and pesticides on your lawn and garden. Use small amounts of slow-release fertilizer and environment-friendly products.

Water Conservation Ordinance Adopted by Camden City

Camden City Council recently approved a water conservation ordinance to help alleviate problems with reduced water pressure in times of drought. With the increasing effects of climate change and global warming felt throughout the world, long-term droughts are more likely to occur in the near future. It is critical to have a plan in place to deal with these conditions as they arise.

In addition, conserving water makes financial sense. Not only can you reduce your water bill, but the less water you use means the less water that needs to be treated at the wastewater treatment plant, thus keeping sewer rates in check.

Camden's water conservation ordinance states that, during a drought situation:

- Lawns may be watered two days per week. Properties with even number addresses may only
 water on Mondays and Thursdays. Properties with odd number addresses may only water on
 Tuesdays and Fridays.
- Watering may only be conducted between the hours of 6:00am and 9:00am or between 5:00pm and 8:00pm.
- No single area shall be watered more than 30 minutes per day.
- Flowers and shrubs may be watered as needed with a hand-held hose equipped with an automatic shut-off nozzle.
- No hose or hose-end watering shall be permitted when it is raining.
- Irrigation systems must only run between midnight and 10:00am.

We are asking for your support in adhering to these guidelines. The City is committed to water conservation and encourages residents to get on board. Start saving water and money now! And help us make Camden a sustainable community!
